## SELECTED SOFTWARE

---

**GitHub:** <https://github.com/mechtaev>

- **B-Assist:** B-Assist (ICSE SEIP 2024) is the first deployment of automated program repair with the focus on user experience. Its key idea is to present patch suggestions within existing pull requests to ensure that they are generated at the right moment, the right context, and suggested to the right developers. The tool was deployed at Bloomberg in 2023 across 1000 repositories.
- **Modus:** Modus is a language for building Docker/OCI container images. Modus uses logic programming to express interactions among build parameters, specify complex build workflows, automatically parallelise and cache builds, help to reduce image size, and simplify maintenance. Received over 250 stars on GitHub soon after its public release.

- **Angelix:** the first constraint-based program repair system that scales to large real-world programs. Angelix generated a patch for the well-known Heartbleed vulnerability; it has been downloaded by researchers from over 60 institutions, and has been used in several projects including an intelligent tutoring system at IIT Kanpur. <http://angelix.io>
- **program-repair.org:** the largest online community dedicated to program repair founded by me in 2016. Has over 120 subscribed program repair researchers from around the world; researchers from over 10 institutions have contributed content to this website; the website has 200-300 unique visitors per month. <http://program-repair.org>
